

Electronic dose queue allows users to identify orders by type and urgency

Individual labels print when doses are prepared

Product labels are scanned to confirm correct drug selection

Detailed preparation instructions facilitate standardized processes

Digital images capture the actual volume used for preparation

Final image captures completed dose, ready for pharmacist check

Remote inspection allows pharmacists to approve, reject or request rework of doses without entering the cleanroom

Zoom in on high-resolution images taken during dose preparation, including the steps used to reconstitute vials

Barcode-enabled dose tracking provides continuous visibility
